A Note on Container Dimensions:

The below figures were calculated by using the 85% rule, which is standard industry practice. By using the actual figures listed above for example, a 20' shows a total capacity of 33.1 cbm. In order to fit 33.1 cbm in a 20', you need to be shipping water to be able to get this capacity. Thus, the below figures represent the best known industry average and are a good indication. There may be a deviation of 1-2 cbm up/down from the average listed.

Container Size	Max Volume Cu/Ft	Max Volume CBM
45'	2595	72
40' H	2305	63
40' GP	2040	56
20' GP	995	28
